

Endurance™ is a new plant growth regulator and nutritional, designed to impact yield and quality in specialty and permanent crops by increasing fruit set and fruit retention. Applying Endurance during early reproductive periods increases photosynthesis and helps a crop overcome situations that result in early fruit abortion helping achieve a grower's yield and quality goals.

FEATURES

- Formulated with an optimized ratio of amino acids and a plant growth regulator to drive photosynthesis and metabolic activity
- Contains GABA (gamma-amino butyric acid) which upregulates genes associated with stress mitigation, and increases the rate and efficiency of photosynthesis
- Contains Choline Chloride which helps protect cell integrity within crop

GROWER BENEFITS

- Helps the crop set more fruit during early reproductive stages
- Promotes retention of fruit and takes advantage of an aggressive fertility program
- Increases photosynthesis for a more vigorous crop that can overcome the stresses of the season
