

EVOLUTION™ WSG

THE DRY FERTILIZER SOLUTION

EVOLUTION™ WSG is an extracted carbon granule that can easily be blended into any dry fertilizer program. This innovative product-based Loveland Technology, LPs proprietary carbon extraction and reaction process, increases nutrient uptake, reduces plant stress, and sets the stage for improved soil health. **Evolution WSG** brings the grower benefits of **EVOLUTION** liquid into the convenience of a dry granule.

FEATURES

- Easily blends with dry fertilizer
- Low use rate
- Enhances nutrient availability and uptake
- Improves nutrient chelation
- Supports desirable soil physical properties
- Nurtures conditions for improved soil health

GROWER BENEFITS

- Fully soluble granule allows for near-immediate activity
- Unlocks recalcitrant soil nutrients, improves nutrient solubility
- Promotes beneficial microbes to make soil nutrients more available to the crop

RATES

- 4 - 10 lbs/A
- 10-20X lower use rate than raw humics

EVOLUTION WSG

Side by Side Trials

Evolution WSG in a Blend

Evolution WSG is designed to behave like dry fertilizer with solubility similar to urea and hardness and particle size like MAP, resulting in seamless blending, no segregation, and consistent spreading.
