

Whether it's applied via drip, drench, inline, or foliar application, ReaX K25 delivers highly soluble and readily available forms of Potassium when your plants need it. Armed with patented C² Technology from Loveland Products, ReaX K25 helps mobilize potassium and other nutrients to key growing areas of each plant to help almost any crop reach its maximum yield potential.

FEATURES

- Unique C² formulation maximizes overall nutrient availability and mobility in the soil and superior uptake in the plant
- C² Technology components mitigate salt to improve water and nutrient uptake
- Formulated to provide season-long availability of existing nutrition and applied fertility

ANALYSIS

0-0-25 with C² Technology

GROWER BENEFITS

- 25% Potassium supports mid to late season crop development for a stronger finish to the season
- Fuels the carbohydrate accumulation and translocation processes for structural growth and fruit yield and quality optimization
- Sufficient K levels in tissue reduce sensitivity to disease infestation

RATES

2-12 qt/A

C² TECHNOLOGY

C² is a proprietary technology consisting of extracted Carbon and Carbohydrate reacted with nutrients for improved Soil Health and Plant Performance.

Carbon: Increases nutrient availability by fostering growth of beneficial soil microbes and positively impacting soil attributes creating better holding capacity for nutrients and water

Carbohydrate: Improves nutrient uptake and availability in both soil and foliar applications
